

# ARKANSAS ROCKHOUND NEWS

## MISSION STATEMENT

The Central Arkansas Gem, Mineral and Geology Society is dedicated to promoting interest in mineralogy and the related sciences, interest in lapidary and the related arts; to encourage field trips and the enjoyment of collecting and preserving minerals as they occur in nature, and the study of geological formations, especially those of our Natural State of Arkansas.

We are a small group of people that enjoy getting together to share our common interests.

Regular meetings are at the Terry Library 6:30 PM on the fourth Tuesday of the month (except December)

Terry Library is located at:

2015 Napa Valley Dr.  
Little Rock, Arkansas  
72212

SEPTEMBER 2016

## *From the president...*

As summer comes to an end, we have some busy times ahead. Our October show is coming quickly. Please take a moment and sign up on line at to help out at the event. (<http://www.signupgenius.com/go/4090d4faeaa2ba0fe3-greater>)

If you are unable to attend, we ask that you provide a treat or desert for our vendors. They can be dropped off at the Jacksonville Community Center Friday, Saturday or Sunday morning. We really need the extra hands on property for things such as: food and drink runners to the vendors, security duty to roam and keep a keen eye, children's activities, volunteer to watch booths for vendors to make bathroom runs, assist show patrons at the desk to sign up for door prizes, club table, show end breakdown and clean up: you name it, your help would be appreciated.

Field trip on the 3<sup>rd</sup> weekend, please join us on Miller Mountain for Quartz! Some early practice for those who want to enter the Mt. Ida Crystal dig contest on the 2<sup>nd</sup> weekend of October.

I also wanted to mention that the club will need to nominate and select Club Officers in the next several months. Your help and commitment is wanted. Please consider accepting a leadership role for the upcoming 2017 year. We will be asking for volunteers outside of the current leadership to form a committee to explore interest in positions and nominations. The club vote will be in November, please make sure that you plan to attend.

Please keep Tom Sharp and John & Angelee Peeler in your prayers: both Tom and John have been dealing with some challenging health issues and serious treatment recently. Please keep them in your thoughts and prayers.

See you at the Dig!  
Barbara

**ARKANSAS ROCKHOUND NEWS** is the official newsletter of the Central Arkansas Gem, Mineral and Geology Society. It is published monthly. To submit information, articles or photographs please email Nikki Heck, [nikkiheck@windstream.net](mailto:nikkiheck@windstream.net).

Programs, Vacant

## Meeting minutes...

---

**August 23, 2016**

**Submitted by Lenora Murray, secretary**

The August meeting of the club was opened by President Barbara Champagne, with 25 members present. It was voted to accept the minutes as printed in the newsletter. Thank you again to Vice-President Connie Schoeneman for the minutes in the absence of the secretary, Lenora. Since Dodson's were on a Yellowstone vacation, there was no treasurer report.

In old business, David Hodge reported on the August Magnet Cove field trip. The rain didn't dampen spirits, and folks still managed to find shark's teeth. Show chair Tom Sharp mentioned we had a couple new dealers, including Tim O'Brien from Lafayette, La. We will need small specimens for the kid's dig and the spin and win. Please bring them to the next meeting! Virginia Wilhelm passed out show fliers and will get more printed when these are all gone. She encouraged everyone to post them wherever you can! Connie Schoeneman reported that John, show co-chair, found a place to get the post cards to mail printed up. It was voted that John should order the cards so Anne Austen can get them in the mail 10 days before the show. Everyone is encouraged to look for an e-mail invite to "SIGN UP GENIUS" the website where all the club members can sign up to work at the show. PLEASE volunteer – we need lots of help to do this show in October. Barbara or Nikki Heck will send out reminders via email. And last thing about the show—Bill Alcott is in charge of the display case contest. Please contact him if you want a case and didn't sign up already.

The Caroling in the Caverns trip to Blanchard Springs in November was discussed. Members interested in attending need to contact Stephanie Blandin ASAP to get their money to her. She has to order tickets ahead of time. It sounds like a delightfully different field trip on November 26<sup>th</sup>.

In new business, Mike Austen mentioned a California club wants 'representative' rocks from all 50 states for an upcoming show. He also will be setting up a display at Roosevelt Thompson Library for September—he could use help with this... Lenora had fliers for the Mt. Ida Quartz show the weekend after our show—Oct 14-16.

David Hodge discussed going to Miller Mountain for quartz as the September field trip. We agreed to meet at the mine at 9 AM on Sept. 17. CALL DAVID HODGE if you plan to attend.

For Show and Tell Brandon Heck brought specimens from their recent trip to Colorado. There was amethystine and silver in matrix and other mineral samples from Creed and the gold mine dumps near Tincup. Nikki gave us a short version of the highlights of their trip. (The longer version was in the August newsletter, complete with great pictures.) Then the meeting was adjourned for the auction.

The auction was conducted by Bill Alcott, ably assisted by Barbara Champagne. There was friendly competition for a few items, and lots of laughs on the way to a successful auction. Thanks to a couple generous members the club raised almost \$100 for our general fund. Virginia Wilhelm and Lenora Murray kept the 'books' in the absence of our treasurer. Thanks to all who brought materials and all who bid, successfully or not, for another great auction. And special thanks to our auctioneer Bill Alcott and our president Barbara who kept things organized.

### Display Case Contest

Greetings, Y'all! Just wanted to touch base with you about the display case contest at the October show. Participation in the display cases has been somewhat limited in the past, but I'm sure you all have some rocks, gems and minerals that you'd like to show off. Here's your chance! This year, we're going to have an actual contest for the best display case. Who's going to decide the winner? Every person that attends the show! I'm going to make up ballots to be handed out at the welcome desk as folks register, and they'll decide which case they like best. What will be their voting criteria? They might like the information provided, or the arrangement of the specimens. They might have an interest in a particular variety of rock, or they might just like all those pretty rocks. At the last door prize drawing, the ballots will be counted and the winner declared. I have a winner's plaque in the works, but if there's other prize ideas out there, I'd like to hear them. I'm also planning to do an article for the newsletter highlighting one of the cases each month. If we end up with more cases than months, I'll do two a month! Right now there are four cases spoken for. If you contact me before the 1<sup>st</sup> of September to reserve a case, I will build enough to make sure everyone gets one. I just ask that if you reserve one, please use it! For more information, contact me at: Bill Alcott, [mrbill@fidmail.com](mailto:mrbill@fidmail.com), (501) 231-2030.

**HELP!**  
Send in your:  
stories, articles, tips,  
photos  
suggestions or questions!  
Submissions due by the  
28th of each month.

## *From the editor...*

---

Yea for fall! Well, sort of, we're getting there! So far fall is shaping up to be very busy. We have so many things going on at home, at work and we have our gem show coming up in October. Something we're very excited about!

I do have some announcements... one being about the show, Barbara mentioned it in her message but it can't hurt to have it in here twice. Go out to the [SignUpGenius](#) page and sign up to volunteer for the show. There are many different areas that we need help with, there is something for everyone! Also, if you're on Facebook, share news about the show, you can link to the CAGMAGS website or post a photo of the flier for the show. Let's make this the best and busiest ever!

Next item. Some road trip opportunities if anyone is interested. Once is an amazing chance to dig some turquoise out in Nevada. I had hoped to get to go but as I said earlier our fall is quite busy and I will not be able to make it. The trip is being put on by Kristy Therrin (California), she is a jewelry and lapidary artist (a fantastic one at that!!) as well as a turquoise prospector and miner. She takes many trips to Nevada and has a good relationship with many of the mine owners. So many people kept asking about where they could go to hound for some turquoise that she decided to put together a "tour." She has both two and three day trips available, all in the Tonopah, Nevada area. The trips include turquoise, white buffalo and variscite mines. You keep all that you find! Check out her website for more information, <http://www.excavade.com/tours>.

The next road trip opportunity is in South Texas, my friend Teri Smith has some fall hunts scheduled, beginning this weekend! If you're interested in visiting this area (full of awesome agate) let me know and I will forward her email to you, I don't think she has her website calendar updated yet with the new trips. To read about the ranches check out her site, <http://terismithrockhunts.com/>.

Finally, a member note, Roberta Frost sent a message of thanks for the get well card sent to Spud. She says he is doing better. We'll continue to pray for y'all!

Don't forget to send me your news items, photos and stories!

### Raising a Cabochon

When a cabochon sits too low in a bezel, the bezel hides a lot of the stone. The solution is to either sand down the bezel height or boost up the stone. If you're going to raise it up, question is what is the best material to use ?

I was taught to use fine sawdust but now think that might be a problem when used in rings. I reason that rings will frequently get wet, which would cause the sawdust to swell in size and push the stone against the bezel. Then when the sawdust dries out, the stone would be a little loose.

In any case, I now prefer pieces of plastic sheet to boost up my stones. Pieces are readily available from product packaging or from old credit cards. I just cut a piece to loosely fit the bezel and drop in the stone (with some dental floss) to check it's height.

## Of interest...

### The Famous Silver Mines of Kongsberg, Norway.

by Dr. Nathalie Brandes  
Member of the Houston Gem & Mineral Society  
(originally published in the Houston Gem and Mineral Society's *The Backbender's Gazette*, August 2014)

In the summer of 1623, the children of two farmers were tending livestock in rural Norway when they found some rocks that caught their interest. They took the rocks home and showed their parents. One of the fathers recognized these rocks as silver, smelted them, and tried to sell the metal in nearby villages.

One of the many statues in Kongsberg, Norway commemorating its mining heritage. Photo by P. Brandes.

Suspecting that the farmer was selling stolen silver, local authorities arrested him. To secure his release, he revealed where the ore had been discovered. Later that year, the Silver Works at Kongsberg were established, and for the next 335 years they were an important part of Norway's economy and industrial development (Helleberg, 2000).

The city of Kongsberg is located approximately 70 km west southwest of Oslo at 171 m above sea level (Groven and Niklasson, 2005). The area of ore-bearing rock is about 15 km wide, trending along a north-south line for about 30 km (Larsen et al., 2005). The region is located along the transition between the southern and middle boreal forest (Moen et al., 1999). Forest cover of Norway spruce and Scots pine dominates the landscape with ground vegetation that includes heather, bilberry, lingonberry, mosses, and lichens (Groven and Niklasson, 2005).

The oldest bedrock in the Kongsberg area is ~1.6 Ga. Two events of deformation and metamorphism affected the area—the first at

Looking down the River Lågen, Kongsberg, Norway. Photo by P. Brandes.

~1.5–1.6 Ga and the second at 1.1–1.2 Ga (Jacobsen and Heier, 1978). The history of these rocks can be summarized into four basic stages. The oldest rocks began as volcanics with geochemistry similar to island arcs as well as some sediments. These rocks were intruded by gabbros and diorites followed shortly thereafter by the first event of deformation metamorphism. This amphibolite to granulite facies metamorphic event resulted in quartzo-feldspathic gneisses, dioritic gneisses, and amphibolites. Gabbro and dolerite later intruded the rocks. Lastly, the Meheia and Helgevannet granites were emplaced penecontemporaneous to the second event of deformation and metamorphism to amphibolite facies at 1.1-1.2 Ga (Jacobsen, 1975; Jacobsen and Heier, 1978). Ultimately, these events created bedrock consisting of quartz-plagioclase-biotite gneiss, mica and chlorite schist, amphibolite, and granite gneiss (Bugge, 1917; Starmer, 1985).

An example of a fireset drift in the Kongens Gruve (King's Mine). Photo by P. Brandes

The ore deposits at Kongsberg are a five-element-type (Co-Ni-As-Ag-Bi) vein system (Halls and Stumpfl, 1972; Bugge, 1978; Johnsen, 1986; Kissin, 1992; Marshall, 2008). The age of the hydrothermal system that formed the veins has been dated at  $265 \pm 3$  Ma and is genetically related to the Oslo Rift (Ineson et al., 1975; Ihlen, 1986).

Kissin (1988) noted that the elevated heat flow associated with rifts can mobilize formational brines to form five-element-type deposits. The silver in the deposits is derived from the black

The famous Kongsberg Silver from "The Vault" at the Norsk Bergverksmuseum.  
Photo by P. Brandes

shales of the Oslo region, which have been calculated to contain more than enough silver to account for the Kongsberg deposits (Frøyland and Segalstad, 1992; Segalstad, 1996; Segalstad and Raade, 2003). The ore formed about 3 to 4 km deep from fluids 200 to 300° C with salinities as high as 35% NaCl equivalent (Segalstad, 1985, 2000; Larsen et al., 2005). The bedrock of the Kongsberg area includes sulphide-rich zones locally known as fahlbands (Gammon, 1966). When the hydrothermal fluids encountered the fahlbands, they chemically reacted and formed the famous silver deposits (Segalstad, 2001). Minerals found in the hydrothermal veins include quartz, pyrite, calcite, baryte, fluorite, galena, sphalerite, chalcopyrite, silver sulphosalts, argentite, native silver, and pyrrhotite. "Coalblende," a bitumen compound likely derived from the Oslo Rift shales, is also found in the veins (Neumann, 1944; Johnsen, 1986, 1987; Bancroft et al., 2001; Segalstad and Raade, 2003).

After the discovery of silver, King Christian IV of Denmark-Norway established the mines in 1623. The following year, the town of Kongsberg was founded on a waterfall of the River Lågen to provide power for the stamp mill and smelter (Helleberg, 2000). At the time, the mining industry in Norway was not well-developed, so miners, engineers, and mining officers were imported from Germany to develop the silver mines (Nynäs and Midttømme, 2007; Helleberg, 2010). Firesetting was used during much of the history of the mining district as the main way to soften and break rock. The first use of black powder for blasting occurred in 1659, but it wasn't until the mid-1700s that blasting was commonly used. Firesetting, however, continued to be used to create horizontal works because of its low cost. The problem of ventilation was solved with the use of an "adit loft," which was created by dividing the adit by wood or brick into a lower level where

the miners worked and an upper level for the smoke. After the use of dynamite was introduced in 1872, firesetting was abandoned, its last recorded use in 1890 (Berg, 2004). The mines were initially dewatered using hand pumps, but waterwheels were soon installed to operate pumps.

Many canals and aqueducts that were used to bring water to power the wheels can still be seen. Steam power and electricity were introduced to the mines in the 1880s (Helleberg, 2000).

For much of the Kongsberg Mining District's history, it was the largest mining operation in Norway (Moen, 1967; Berg, 1998; Helleberg, 2000). As early as the 1600s, the mines offered workers desirable benefits such as sick pay, free medical care, pensions, and primary and secondary schools for children. In 1757, the Norwegian Mining Academy was established in Kongsberg to train mining engineers (Nordrum and Berg, 2004; Nordrum, 2008). The high point of mining in the district occurred in 1770, when 78 mines employed about 4000 workers (Nordrum, 2008). By 1805, however, much of the

The Norsk Bergverksmuseum (Norwegian Mining Museum) in Kongsberg, Norway.  
Photo by P. Brandes

best ore had been extracted, and most of the mines closed (Helleberg, 2000). Because the Mining Academy was still located in Kongsberg, in 1811 it was decided to establish Norway's first university in the city. The following year, however, this decision was changed and the university was established in Christiania (Oslo), and the

Mining Academy was closed in 1814 (Nordrum and Berg, 2004). Fortunately, promising ore zones were discovered in 1816, and many mines reopened (Helleberg, 2000). Peak yearly production was achieved from 1915 to 1916 when 13 tonnes of silver were produced (Nordrum, 2008). Despite declining production, mining continued into the 1950s. The last silver from the Kongsberg Mines was smelted in 1958, ending 335 years of operation that extracted 1350 tonnes of silver (Helleberg, 2000; Nordrum, 2008).

The Norsk Bergverksmuseum (Norwegian Mining Museum) in Kongsberg has preserved many artefacts from the mining operations, including them in displays explaining the history of the mining district. In addition, the museum's vault contains hundreds of spectacular wire silver specimens on display. The museum also maintains surface facilities of the Kongens Gruve (King's Mine) and offers an underground tour of the mine via the Christian VII adit.

## Upcoming area shows...

### September 2016

**9-11—TOLEDO, OHIO:** Annual show; Toledo Gem and Rockhound Club, Stranahan Great Hall; 4645 Heatherdowns Blvd; Fri. 2-8, Sat. 10-6, Sun. 11-5; Adults \$5, Seniors/Students \$4.50, Children under 12 free; 45th Annual Jewelry, Gem and Mineral Show hosted by the Toledo Gem and Rockhound Club. The show offers something for the entire family. Offering finished jewelry, beads, gem trees, faceted stones, mineral specimens, fossils, cabochons, tools, carvings, and more. The club will be demonstrating various lapidary techniques such as faceting, beading, and lapidary skills like making a cabochon. The kids will enjoy the children's area featuring games, activities, and free mineral specimens. Members proudly exhibit their craft and collections along with special exhibits from local universities. A selection of rock and mineral specimens will be for sale along with other items. **10-18—DENVER, COLORADO:** Annual show; Eons Expos, LLLP, Denver Coliseum; 4600 Humboldt Street; Daily 9 am-6 pm, Sun. 9 am-5 pm, Daily 9 am-6 pm, Sun. 9 am-5 pm; Admission is Free!; Open 9 am-6 pm every day except Sunday, 9 am-5 pm. Admission is Free; Parking is Free; Come see 250 dealers on both levels of the Denver Coliseum plus in 100 tent spaces outside. It's all here: fine minerals, fossils, meteorites, gems, artisan jewelry, gold, silver, lapidary, beads and rough — split evenly between wholesale and retail. Running from Sept 10 - 18, this is Denver's only weekend-to-weekend show and attracts 18,000 visitors over those nine days. With 2,000 tables covered with earth treasures and free parking for 1,500 cars on the 33 acre complex, this is America's largest mineral, fossil, gem & jewelry show. The low booth fee and aggressive advertising ensures that the show continues to grow 20% annually -- which makes it interesting to visit every year. Meet the cast of the TV show 'Prospectors' who will be at the show selling their finds. Peruse the dinosaurs on display. Ogle museum-quality sculptures in solid blocks of clear quartz. Take home a piece of the Moon. Select specimens found in only one place on Earth, being offered by the mine owner herself. Prices range from just \$1 to \$1 million. Contact Heather Grana, 235 First Avenue, Keyport, NJ 07735, (973) 903-3256; e-mail: [Heather@EonsExpos.com](mailto:Heather@EonsExpos.com); Web site: <http://www.ColiseumShow.com> Contact Lowell Carhart, (804) 291-6357; e-mail: [LowellCarhart@yahoo.com](mailto:LowellCarhart@yahoo.com); Web site: [www.Eons-Expos.com](http://www.Eons-Expos.com)
